En esta ocasión mostramos como utilizar OpenFiler como un repositorio ISO para poder ser utilizado posteriormente desde XenServer 6.x, mostrando el proceso de instalación de OpenFiler como una VM cargada directamente en el Hypervisor.

La idea pasa por no utilizar un almacenamiento alternativo o una LUN adicional, todo ello con el fín de ser más sencilla la implementación o bién por comodidad de uso, o que las actuales LUN las tengamos asignadas a una serie de funcionalidades específicas que por indicaciones de compañía no se nos permita almacenar las correspondientes ISO en las mismas.

El proceso de instalación de OpenFiler, parasará por descargar el correspondiente ISO, la cual quemaremos en un CD para posteriormente ser instalado,

Crearemos por tanto una nueva VM desde XenCenter,

Utilizando OpenFiler como repositorio ISO en XenServer
