En esta ocasión mostramos un procedimiento de como instalar OpenFiler NSA, crear una LUN y que esta pueda ser utilizada desde XenServer. OpenFiler es una solución OpenSource para poder disponer de una NSA a pleno rendimiento con los distintos protocolos standard más utilizados como NFS, iSCSI, funcionalidades CIFS y con una gran sencillez de instalación y configuración posterior, todo ello bajo plataforma Linux, y perfectamente instalable en cualquier servidor con varios discos en RAID5, una solución muy a tener en cuenta como alternativa de bajo coste e inferiores características con respecto a otras soluciones del mercado.

OpenFiler puede ser descargado pulsando aquí.

Una vez descargada la imagen .ISO podremos realizar la instalación sobre XenServer o bién sobre un equipo físico.

El sistema de arranque iniciará una pantalla de bienvenida,

Escrito por xavisan Viernes, 11 de Septiembre de 2009 16:08 - Actualizado Viernes, 11 de Septiembre de 2009 19:10

Pulsaremos Enter,

lcome to rl	Path Linux
	Loading SCSI driver
	Loading muthase driver
Tab>//Alt.	-Taby between elements (Snace) selects (F12) next screen

Se iniciará el proceso de instalación,
